

Your Health Record, Kept by You

Quick-start, two pages. Keep it next to the computer.

If you feel unwell, or are not sure whether to take a medicine, call your doctor, pharmacist, or emergency services now. Do not wait for an AI or a portal.

The folder

My Health Record/

- | | |
|------------------------|---|
| 1 Original Records/ | copies of what you were given. Never edited. |
| 2 My Notes/ | what you noticed, asked, or think is wrong. |
| 3 AI Conversations/ | answers you chose to keep, with a label on top. |
| Start Here.txt | the message you paste into the AI each time. |
| Questions and Gaps.txt | your running list of open questions. |
| Before You Upload.txt | privacy choices. Read once. |

No download? Make the three folders and three text files by hand. Any notes program works. The message to paste into the AI is in Start Here, and also on the web page, section 3, step 5.

Before you upload anything

A copy of every document you attach goes to the AI company's computers. So: start with one document. Cover account numbers, insurance ID, Social Security number, address, and phone. Turn off the "use my chats to train the AI" setting (look under Settings for "Data," "Privacy," or "Improve the model"). Companies may keep chats for a while even so. Use your own private account, not a work or shared one.

Is this AI working **for** me, or **on** me? Keep asking.

Your first session (about 45 minutes)

- 1 Helping someone else?** Talk with them first. Say what you want to do, show them what you will share, write down what they agreed to in **2 My Notes** with the date. If they cannot take part, do not upload. For yourself? Go to step 2.
- 2** Put the folder where you will find it again. Documents is a good place.
- 3** Read **Before You Upload**. Turn off the training setting in your AI service.
- 4** Put **one** recent document in **1 Original Records**. Name it date first: *2026-09-15 After Visit Summary - Dr [name].pdf*
- 5** Open **Start Here**. Fill in the two blanks. Copy the message between the dotted lines.
- 6** Open your AI. New chat. Paste the message. Attach the document (paperclip or plus sign). Ask:

Explain this in plain language. Tell me what it says, what it does not say, and what you are unsure about.
- 7** Read the answer with the three questions below in front of you. Ask follow-ups. "Where exactly does it say that?" is always fair.
- 8** Copy the answer (copy button under it) into a new text file in **3 AI Conversations**. Put the label on top (page 2). Copy the open questions you care about into **Questions and Gaps**.

Three questions for every AI answer

Where did that come from?

Find it in your document. If you cannot, the AI should have said so. Did it?

What is missing?

What did the AI skip? What does the record itself not cover? The AI cannot see what it was not shown.

How sure is it?

Did the AI say? "I am confident" is not proof. Check the page.

The label for every saved answer

Date: 2026-09-20

AI service: ChatGPT (free)

What I showed it: 2026-09-15 After Visit Summary - Dr Okafor.pdf

My question: Explain this in plain language. What does it not say?

Did I check the sources? Yes, found all three points in the summary. / Not yet.

File name, date first: 2026-09-20 AI - After Visit Summary explained.txt

Three kinds of entries in Questions and Gaps

QUESTION for your care team. **GAP** something the records do not say. **CONFLICT** two sources disagree, or a record does not match what you remember. For each: the date, what, which documents, who raised it, and later, who answered and when. Do not delete answered ones. Mark them answered.

Next time

Add one more document. New chat, paste Start Here, attach both, and ask: *"Compare these two. What changed? Is there anything in one that does not match the other?"* This is where out-of-date medication lists and missing follow-ups show up. Write them down. Take the list to the people who can answer: your doctor's office, your pharmacist, the portal message box.

Rules that keep the folder trustworthy

- Never edit anything in **1 Original Records**. Write corrections in **2 My Notes**.
- Every note says the date and who wrote it. Say what you saw, not what you concluded.
- An AI answer is one reading of your documents by a tool you directed. It is not a medical record and not a medical opinion.
- Wrong AI answers you caught stay in the folder, marked wrong. They are evidence too.
- The decisions are yours. The AI helps you understand and ask. Your care team answers.
